

Making calculations

1. Roll a die twice and write down the two numbers.

 $\square \quad \square$

2. Use the numbers to make two addition calculations.

$\square + \square =$

$\square + \square =$

3. Now use the three numbers in the calculations above to make two subtraction calculations.

$\square - \square = \square$

$\square - \square = \square$

Remember that the largest number needs to come first in the subtraction calculations.
