

Task: *Make comparisons between the life cycle of 2 different animals*

Part 1: Fill in the statements below into this venn diagram to show similarities and differences. Use the internet to help you identify which statement belongs to which animal

Born in eggs in the water	The animal hatches into a larvae
Hundreds of eggs are laid on a leaf	They eat a lot to prepare for winter
They are born with gills to breathe in water	They develop lungs as they become an adult
When they hatch they eat the jelly from their eggs	They spend 9 months as a pupa
They lay eggs	Once they are an adult, they mate to create eggs
They start to grow legs and arms	They have a metamorphosis where part of their body changes

Part 2: Write a new comparison of the life cycles of two contrasting animals. Use your own research to identify similarities and differences. You may create another venn diagram if you choose, although this is a good opportunity to practise your comparison writing skills:

One of the animals...	This is the same as...	In contrast...	Although...
However the other animal...	This is different to...	On the other hand...	This is similar to... but different because...

Answers:

Born in eggs in the water	The animal hatches into a larvae
Hundreds of eggs are laid on a leaf	They eat a lot to prepare for winter
They are born with gills to breathe in water	They develop lungs as they become an adult
When they hatch they eat the jelly from their eggs	They spend 9 months as a pupa
They lay eggs	Once they are an adult, they mate to create eggs
They start to grow legs and arms	They have a metamorphosis where part of their body changes
