

Lines of Symmetry

Identify the lines of symmetry in these shapes.

Lines of Symmetry

Are these lines of symmetry all correct?
Are any missing?

Lines of Symmetry

Are these statements always, sometimes or never true?

- A pentagon has five lines of symmetry.

Sometimes

- A square has four lines of symmetry.

Always

- A scalene triangle has three lines of symmetry.

Never

Lines of Symmetry

Why is this shape **not** symmetrical?

Because the leaf curls in one direction, it does not have reflective symmetry.

If we looked with a mirror, it would not be the same on both sides.

Lines of Symmetry

Shapes with both a horizontal and vertical line of symmetry always have diagonal lines of symmetry, just like this one here.

Is Anja correct?

No, here are some examples of shapes with vertical and horizontal lines of symmetry but no others:
