

Uplands Manor Primary School

Power Maths calculation policy, KS1

The following pages show the *Power Maths* progression in calculation (addition, subtraction, multiplication and division) and how this works in line with the National Curriculum. The consistent use of the CPA (concrete, pictorial, abstract) approach across *Power Maths* helps children develop mastery across all the operations in an efficient and reliable way. This policy shows how these methods develop children's confidence in their understanding of both written and mental methods.

Overview of Written Calculation Approaches

Early Years into KS1

- Visualisation to secure understanding of the number system, especially the use of place value resources such as Base 10, Numicon, 100 Squares, egg boxes, part-whole models and abaci.
- Secure understanding of numbers to 10, using resources such as Numicon, Tens Frames, fingers and multi-link.
- Subitising to begin making links between the different images of a number and their links to calculation.
- Practical, oral and mental activities to understand calculation.
- Personal methods of recording.
- Children should not be introduced to symbols for the four operations until Year 1.

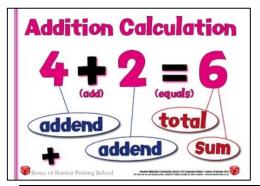

Key Stage 1

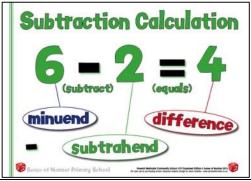

- Introduce signs and symbols (+, -, = and <> to compare numbers in Year 1 and x and ÷ in Year 2)
- Add and subtract 1-digit and 2-digit numbers up to 20, including 0 in year 1 and two 2-digit numbers up to 100 in Year 2.
- Extended visualisation to secure understanding of the number system to 100, especially the use of place value resources such as Base 10, Place Value Charts & Grids, Number Grids, Arrow Cards and Place Value Counters.
- Subtraction should be taught as finding the difference and counting back, selecting according to the calculation.

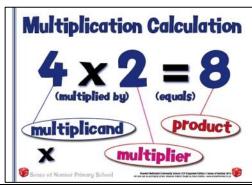

1

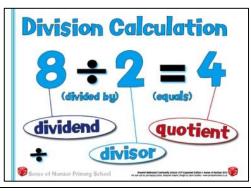

- Further work on subitising and Tens Frames to develop basic calculation understanding, supported by Numicon and multi-link.
- Continued use of practical apparatus to support the early teaching of 2-digit calculation. For example, using Base 10 or Numicon to demonstrate partitioning and exchanging before these methods are taught as jottings / calculations.
- Methods of recording / jottings to support calculation (e.g. partitioning or counting on).
- Use images such as empty number lines to support mental and informal calculation.
- Children should explore practically both grouping and sharing for division.

	<u>Year 1</u>				<u>Ye</u>	<u>ar 2</u>	
Addition	Subtraction	Multiplication	Division	Addition	Subtraction	Multiplication	Division
Numeral – how to write a number using digits Digit – 24 is a 2-digit number. The 2 represents the tens, the 4 represents the ones Sum – the total of one or more additions Total – the sum found by adding 10 more than.	Subtract – to carry out the process of subtraction Minus – a name for the symbol '-' Difference – the answer to a subtraction.	Groups of, sets of, lots of	Sharing – share equally a number of objects into a specified number of groups. Divide – to carry out the process of division	Addend – a number to be added to another Commutative – addition is commutative so 8 + 2 = 2 + 8 Inverse – addition and subtraction are inverse operations so 7 + 3 = 10 and 10 – 3 = 7 Exchange – when adding ones if the total is greater	Inverse – addition and subtraction are inverse operations so 10 - 4 = 6 and 6 + 4 = 10 (it is NOT commutative) Exchange – when the number to subtract is smaller than the number we are subtracting from we	Multiply – to carry out the process of multiplication Multiple – a number in a times table e.g. the multiples of 2 are 2,4,6 etc. Groups of, lots of, sets of, times, multiplied by – different ways to say the symbol "x"	Sharing – sharing equally between Grouping - put into groups of Divided by – sharing or grouping Inverse – multiplication and division are inverse operations so 10 ÷ 2 = 5 and 5 x 2 = 10

than 10 we exchange 10 ones for a ten. Product – the result of multiplying 2 numbers.	
--	--

KEY STAGE 1

Children develop the core ideas that underpin all calculation. They begin by connecting calculation with counting on and counting back, but they should learn that understanding wholes and parts will enable them to calculate efficiently and accurately, and with greater flexibility. They learn how to use an understanding of 10s and 1s to develop their calculation strategies, especially in addition and subtraction.

Key language: whole, part, ones, ten, tens, number bond, add, addition, plus, total, altogether, subtract, subtraction, find the difference, take away, minus, less, more, group, share, equal, equals, is equal to, groups, equal groups, times, multiply, multiplied by, divide, share, shared equally, times-table

Addition and subtraction: Children first learn to connect addition and subtraction with counting. but they soon develop two very important skills: an understanding of parts and wholes, and an understanding of unitising 10s, to develop efficient and effective calculation strategies based on known number bonds and an increasing awareness of place value. Addition and subtraction are taught in a way that is interlinked to highlight the link between the two operations. A key idea is that children will select methods and approaches based on their number sense. For example, in Year 1, when faced with 15 - 3 and 15 - 13, they will adapt their ways of approaching the calculation appropriately. The teaching should always emphasise the importance of mathematical thinking to ensure accuracy and flexibility of approach, and the importance of using known number facts to harness their recall of bonds within 20 to support both addition and subtraction methods.

In Year 2, they will start to see calculations presented in a column format, although this is not expected to be formalised until KS2. We show the column method in Year 2 as an option; teachers may not wish to include it until Year 3.

Multiplication and division: Children develop an awareness of equal groups and link this with counting in equal steps, starting with 2s, 5s and 10s. In Year 2, they learn to connect the language of equal groups with the mathematical symbols for multiplication and division.

They learn how multiplication and division can be related to repeated addition and repeated subtraction to find the answer to the calculation. In this key stage, it is vital that children explore and experience a variety of strong images and manipulative representations of equal groups, including concrete experiences as well as abstract calculations.

Children begin to recall some key multiplication facts, including doubles, and an understanding of the 2, 5 and 10 times-tables and how they are related to counting.

Fractions: In Year 1, children encounter halves and quarters, and link this with their understanding of sharing. They experience key spatial representations of these fractions, and learn to recognise examples and non-examples, based on their awareness of equal parts of a whole. In Year 2, they develop an awareness of unit fractions and experience non-unit fractions, and they learn to write them and read them in the common format of numerator and denominator.

	Concrete	Pictorial	Abstract
Year 1 Addition	Counting and adding more Children add one more person or object to a group to find one more.	Counting and adding more Children add one more cube or counter to a group to represent one more.	Counting and adding more Use a number line to understand how to link counting on with finding one more.
		00000	one more 0 1 2 3 4 5 6 7 8 9 10
		One more than 4 is 5.	One more than 6 is 7. 7 is one more than 6.
			Learn to link counting on with adding more than one. 5 + 3 = 8
	Understanding part-part-whole relationship Sort people and objects into parts and understand the relationship with the whole.	Understanding part-part-whole relationship Children draw to represent the parts and understand the relationship with the whole. The parts are 1 and 5. The whole is 6.	Understanding part-part-whole relationship Use a part-whole model to represent the numbers. $6 + 4 = 10$ $6 + 4 = 10$
	The parts are 2 and 4. The whole is 6.		
	Knowing and finding number bonds within 10	Knowing and finding number bonds within 10	Knowing and finding number bonds within 10

Break apart a group and put back together to find and form number bonds.

3 + 4 = 7

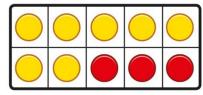

6 = 2 + 4

Use five and ten frames to represent key number bonds.

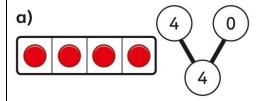

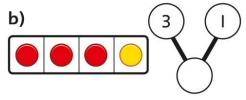

5 = 4 + 1

10 = 7 + 3

Use a part-whole model alongside other representations to find number bonds. Make sure to include examples where one of the parts is zero.

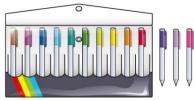

4 + 0 = 43 + 1 = 4

Understanding teen numbers as a complete 10 and some more

Complete a group of 10 objects and count more.

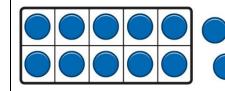

13 is 10 and 3 more.

Adding by counting on

Understanding teen numbers as a complete 10 and some more

Use a ten frame to support understanding of a complete 10 for teen numbers.

13 is 10 and 3 more.

Understanding teen numbers as a complete 10 and some more.

1 ten and 3 ones equal 13. 10 + 3 = 13

5 15 TO AITA 5 THOIE.

Adding by counting on

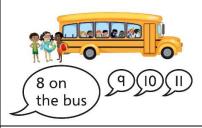

Children use counters to support and represent their counting on strategy.

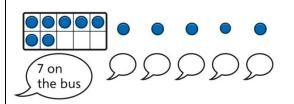

Adding by counting on

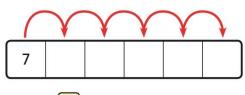

Children use number lines or number tracks to support their counting on strategy.

Children use knowledge of counting to 20 to find a total by counting on using people or objects.

Adding the 1s

Children use bead strings to recognise how to add the 1s to find the total efficiently.

$$2 + 3 = 5$$

 $12 + 3 = 15$

Adding the 1s

Children represent calculations using ten frames to add a teen and 1s.

2 + 3 = 512 + 3 = 15

Adding the 1s

Children recognise that a teen is made from a 10 and some 1s and use their knowledge of addition within 10 to work efficiently.

$$3 + 5 = 8$$

So, $13 + 5 = 18$

Bridging the 10 using number bonds

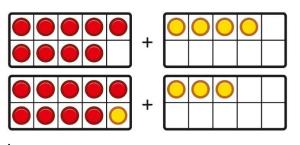

Children use a bead string to complete a 10 and understand how this relates to the addition.

7 add 3 makes 10. So. 7 add 5 is 10 and 2 more.

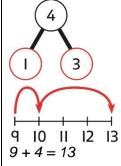

Bridging the 10 using number bonds

Children use counters to complete a ten frame and understand how they can add using knowledge of number bonds to 10.

Bridging the 10 using number bonds

Use a part-whole model and a number line to support the calculation.

Counting back and taking away Counting back and taking away Counting back and taking away

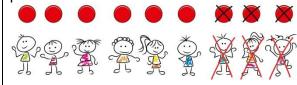

Subtraction

Children arrange objects and remove to find how many are left.

1 less than 6 is 5. 6 subtract 1 is 5.

Children draw and cross out or use counters to represent objects from a problem.

q - = =

There are children left.

Children count back to take away and use a number line or number track to support the method.

9 - 3 = 6

Finding a missing part, given a whole and a part

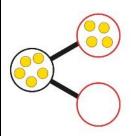

Children separate a whole into parts and understand how one part can be found by subtraction.

8 - 5 = ?

Finding a missing part, given a whole and a part

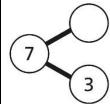

Children represent a whole and a part and understand how to find the missing part by subtraction.

5 - 4 =

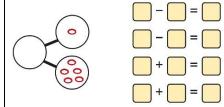

Finding a missing part, given a whole and a part

Children use a part-whole model to support the subtraction to find a missing part.

7 - 3 = ?

Children develop an understanding of the relationship between addition and subtraction facts in a part-whole model.

Finding the difference

Finding the difference

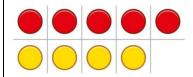

Finding the difference

Arrange two groups so that the difference between the groups can be worked out.

8 is 2 more than 6. 6 is 2 less than 8. The difference between 8 and 6 is 2. Represent objects using sketches or counters to support finding the difference.

5 - 4 = 1The difference between 5 and 4 is 1. Children understand 'find the difference' as subtraction.

10 - 4 = 6The difference between 10 and 6 is 4.

Subtraction within 20

Understand when and how to subtract 1s efficiently.

Use a bead string to subtract 1s efficiently.

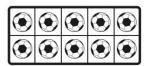

$$5 - 3 = 2$$

 $15 - 3 = 12$

Subtraction within 20

Understand when and how to subtract 1s efficiently.

$$5 - 3 = 2$$

 $15 - 3 = 12$

Subtraction within 20

Understand how to use knowledge of bonds within 10 to subtract efficiently.

$$5 - 3 = 2$$

 $15 - 3 = 12$

Subtracting 10s and 1s

For example: 18 - 12

Subtract 12 by first subtracting the 10, then the remaining 2.

First subtract the 10, then take away 2.

Subtracting 10s and 1s

For example: 18 - 12

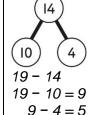

Use ten frames to represent the efficient method of subtracting 12.

First subtract the 10, then subtract 2.

Subtracting 10s and 1s

Use a part-whole model to support the calculation.

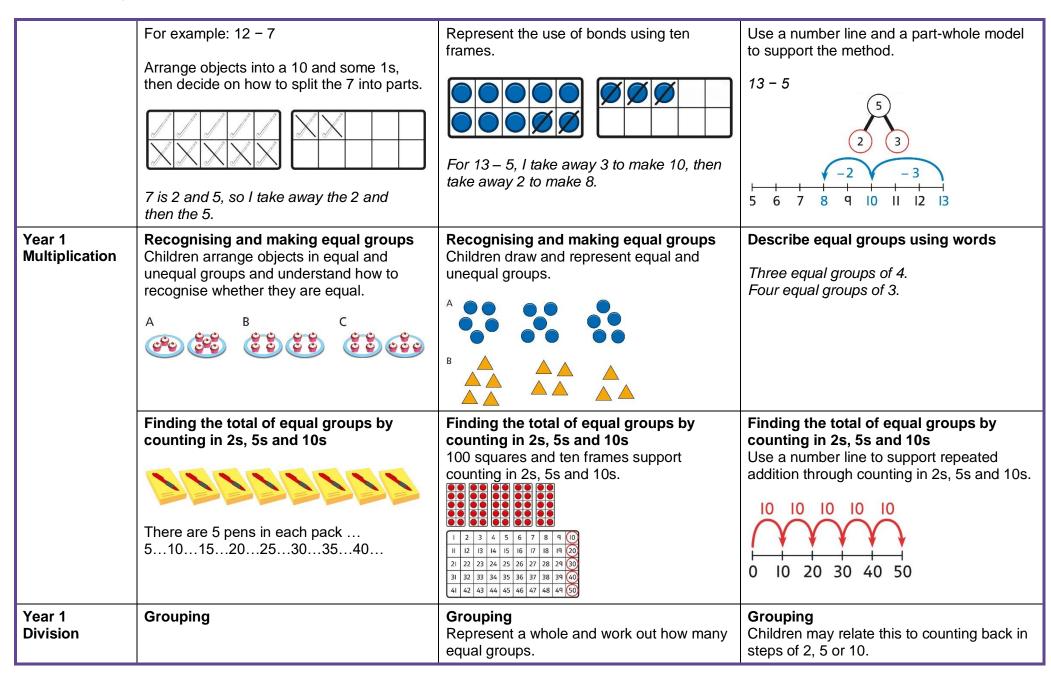

So, 19 - 14 = 5

Subtraction bridging 10 using number bonds

Subtraction bridging 10 using number bonds

Subtraction bridging 10 using number bonds

Learn to make equal groups from a whole and find how many equal groups of a certain size can be made.

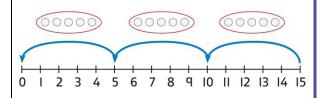

Sort a whole set people and objects into equal groups.

There are 10 children altogether. There are 2 in each group. There are 5 groups.

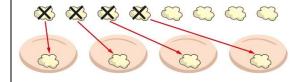

There are 10 in total. There are 5 in each group. There are 2 groups.

Sharing

Share a set of objects into equal parts and work out how many are in each part.

Sharing

Sketch or draw to represent sharing into equal parts. This may be related to fractions.

Sharing

10 shared into 2 equal groups gives 5 in each group.

	Year 2			
	Concrete	Pictorial	Abstract	
Year 2 Addition				
Understanding 10s and 1s	Group objects into 10s and 1s. Bundle straws to understand unitising of 10s.	Understand 10s and 1s equipment, and link with visual representations on ten frames.	Represent numbers on a place value grid, using equipment or numerals. Tens Ones 3 2 Tens Ones 4 3	
Adding 10s	Use known bonds and unitising to add 10s. I know that $4 + 3 = 7$. So, I know that 4 tens add 3 tens is 7 tens.	Use known bonds and unitising to add 10s. I know that $4 + 3 = 7$. So, I know that 4 tens add 3 tens is 7 tens.	Use known bonds and unitising to add 10s. $4 + 3 = \boxed{4 + 3 = 7}$ $4 tens + 3 tens = 7 tens$ $40 + 30 = 70$	
Adding a 1-digit number	Add the 1s to find the total. Use known bonds within 10.	Add the 1s.	Add the 1s.	

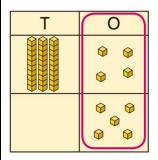

41 is 4 tens and 1 one. 41 add 6 ones is 4 tens and 7 ones.

This can also be done in a place value grid.

Т	0
10	•

34 is 3 tens and 4 ones. 4 ones and 5 ones are 9 ones. The total is 3 tens and 9 ones.

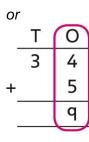

Understand the link between counting on and using known number facts. Children should be encouraged to use known number bonds to improve efficiency and accuracy.

This can be represented horizontally or vertically.

$$34 + 5 = 39$$

Adding a 1-digit number to a 2-digit number bridging 10

Complete a 10 using number bonds.

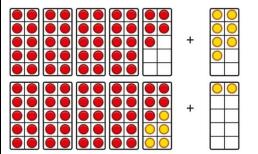

There are 4 tens and 5 ones. I need to add 7. I will use 5 to complete a 10, then add 2 more.

Adding a 1-digit number to a 2-digit

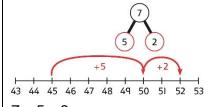

Exchange 10 ones for 1 ten.

Complete a 10 using number bonds.

Exchange 10 ones for 1 ten.

Complete a 10 using number bonds.

7 = 5 + 245 + 5 + 2 = 52

Exchange 10 ones for 1 ten.

number using exchange			T O 2 4 + 8 - 2 - 2 - 1 - 2 - 2 - 2 - 2 - 2 - 2 - 2
Adding a multiple of 10 to a 2-digit number	Add the 10s and then recombine. 27 is 2 tens and 7 ones. 50 is 5 tens. There are 7 tens in total and 7 ones. So, 27 + 50 is 7 tens and 7 ones.	Add the 10s and then recombine. 66 is 6 tens and 6 ones. 66 + 10 = 76 A 100 square can support this understanding. 1 2 3 4 5 6 7 8 9 10 11 12 12 12 12 12 12 12 12 12 12 12 12	Add the 10s and then recombine. 37 + 20 = ? 30 + 20 = 50 50 + 7 = 57 37 + 20 = 57
Adding a multiple of 10 to a 2-digit	Add the 10s using a place value grid to support.	Add the 10s using a place value grid to support.	Add the 10s represented vertically. Children must understand how the method relates to unitising of 10s and place value.

Year 2 Multiplication			

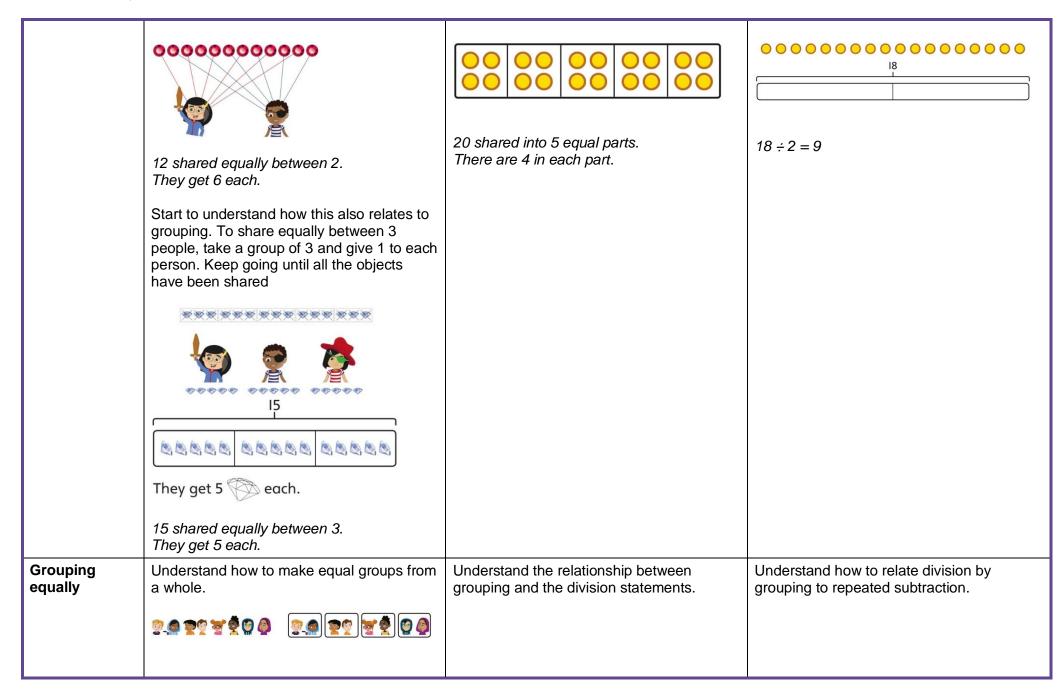

Equal groups and repeated addition	Recognise equal groups and write as repeated addition and as multiplication. 3 groups of 5 chairs 15 chairs altogether	Recognise equal groups using standard objects such as counters and write as repeated addition and multiplication. 3 groups of 5 15 in total	Use a number line and write as repeated addition and as multiplication. $ \begin{array}{cccccccccccccccccccccccccccccccccc$
Using arrays to represent multiplication and support understanding	Understand the relationship between arrays, multiplication and repeated addition. 1111111111111111111111111111111111	Understand the relationship between arrays, multiplication and repeated addition. 4 groups of 5 5 groups of 5	Understand the relationship between arrays, multiplication and repeated addition. $ \begin{array}{c ccccccccccccccccccccccccccccccccccc$
Understanding commutativity	Use arrays to visualise commutativity. I can see 6 groups of 3. I can see 3 groups of 6.	Form arrays using counters to visualise commutativity. Rotate the array to show that orientation does not change the multiplication. This is 2 groups of 6 and also 6 groups of 2.	Use arrays to visualise commutativity. $4+4+4+4+4+4=20$ $5+5+5+5=20$ $4 \times 5 = 20 \text{ and } 5 \times 4 = 20$
Learning ×2, ×5 and ×10 table facts	Develop an understanding of how to unitise groups of 2, 5 and 10 and learn corresponding times-table facts.	Understand how to relate counting in unitised groups and repeated addition with knowing key times-table facts.	Understand how the times-tables increase and contain patterns.

	3 groups of 10 10, 20, 30 3 x 10 = 30	0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0	10 5 × 10 = 50 6 × 10 = 60
Division	Start with a whole and share into equal	Represent the objects shared into equal	Use a bar model to support understanding

8 divided into 4 equal groups.

There are 2 in each group. $12 \div 3 = 4$

12 ÷ 4 = 3

0 1 2 3 4 5 6 7 8 9 10 II 12

 $12 \div 6 = 2$ There are 4 groups now.

12 divided into groups of 3. $12 \div 2 = 6$

There are 4 groups.

Using known times-tables to solve divisions

Understand the relationship between multiplication facts and division.

4 groups of 5 cars is 20 cars in total.

20 divided by 4 is 5.

Link equal grouping with repeated subtraction and known times-table facts to support division.

40 divided by 4 is 10.

Use a bar model to support understanding of the link between times-table knowledge and division.

Relate times-table knowledge directly to division.

 $1 \times 10 = 10$ $2 \times 10 = 20$ $3 \times 10 = 30$ $4 \times 10 = 40$ $5 \times 10 = 50$ $6 \times 10 = 60$ $7 \times 10 = 70$ $8 \times 10 = 80$ I used the 10 times-table to help me. $3 \times 10 = 30$.

I know that 3 groups of 10 makes 30, so I know that 30 divided by 10 is 3.

$$3 \times 10 = 30$$
 so $30 \div 10 = 3$
